

# The Q WasteWater Difference

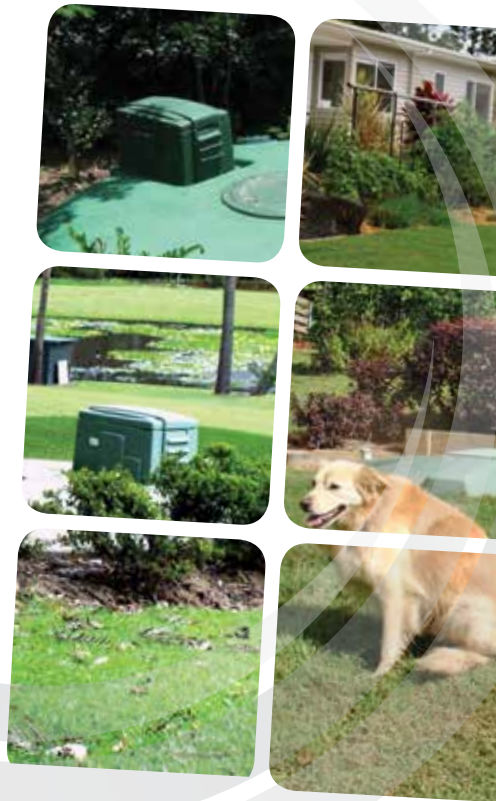

1. Multi-chamber system ensures five separate treatment stages including two clarifiers... (most systems use just one clarifier).
2. Largest capacity injection moulded polymer tanks available. 3200 litres = more volume = better treatment! (Most systems uses only 3000 litres).
3. The Air pump used is a 58watt blower most systems on the market today use an 80watt blower, this saves money on electricity bills. They also have a three year warranty.
4. Standard irrigation pump only uses 250 watts of power at 9m head. (We also offer a 30m head pump).
5. All metal fittings etc, including tank, are 316 grade stainless steel. (Opposition uses galvanised – which rusts!)
6. The Q WasteWater ES D10 has full Queensland State Approvals which can be installed in any Council area, it comes in various models with options to suit any solution.
7. Internal chambers are extremely strong and Corrosion proof made from high quality polymer products.
8. Simple rugged electrics – no fragile motherboard or PLC to fail.
9. Lightweight – Polymer model can be installed by the digger doing the excavation. (no crane needed).
10. Can be transported (on a single pallet) on a flat deck utility or large trailer to site.

*For your peace of mind, experience the Q WasteWater solution:*

- ✓ Largest Domestic Capacity system on the market
- ✓ Fast and easy delivery
- ✓ Proudly designed and manufactured in Queensland
- ✓ Made from superior materials to guarantee quality and reliability
- ✓ Outstanding performance for water quality
- ✓ Energy efficient power saving technology
- ✓ Easy to service, saving money
